

ection B-B

In-ground tile construction ensures that the tiles are installed and waterproofed

1000

A close-up view of a dark wooden surface, likely a door or paneling, showing vertical grain and some wear.

Chinese endemic tree species with straight grain, fine structure, durable, and resistant to water and moisture.

—
—

White limestone with black patterns from Dali, Yunnan Province, mainly used for walls, floors, tables, and columns in buildings.

A close-up photograph showing the binding of the book, which consists of several thick, aged, brownish-yellow pages. The cover material, also a textured, light-colored fabric, is visible at the top and right edges.

Grows in southern Yunnan and Tsimshatsui Ridge, Hong Kong Island, China, with low production costs and strong growth characteristics.

Structure	Material	Source of material	Reuse of material	Life span
Outer Roof	Hanging steel	Recycled steel	reused into steel products	70-80 years
Interior Roof	Polyester fiber	Recycled plastic	reused into secondary polyester	40 years
Wall	Waterproof wood	Local plant	reused as roof and wall	25-35 years
Beams&Colulmn	Wood	Local plant	reused as structure and wall	40 years
Platform	Concrete	Sand&Stone&Cement	crushed and reused as aggregate	60 years
